

TARGET ENERGY SAVING SOLUTION

Automating your operations with our cutting-edge pneumatic tools and solutions

House of All Pneumatic Accessories & Tools

Directional Control Valves

Air Cylinders

Sensors & Switches

Fittings and Tubing

Thermograph Study :

Thermograph study has become one of the most valuable diagnostic studies for industrial application. By detecting anomalies that are usually invisible to the naked eye, thermograph study allows corrective action to be taken before costly system failures occur.

Thermograph studies are a unique study to determine when and where maintenance is needed, for electrical and mechanical installations tend to get hot before they fail. This can avoid costly production breakdowns or even worse, fire.

Thermography Study can provide

1. Predict & prevent fire
2. Increase equipment life cycle
3. Improved productivity
4. Ensure safe & efficient work places

Compressed Air Audit :

Compressed air systems are the backbone of daily operations in many industrial facilities. The power equipment and drive essential processes, so it's critical they operate at peak efficiency.

A compressed air audit is a proactive way to identify and resolve these issues before they escalate.

Why a compressed air audit ?

1. Improving Performance
2. Lowering Operational Costs
3. Preventing Downtime and Extending Equipment Life

**" WE CREATE AN
ENERGY EFFICIENT
ENVIRONMENT "**

- ✓ Industrial Energy Audits ✓ Pneumatic Cylinder & Valve Sales & Service ✓ Compressed Air Audits
- ✓ Air Leakage Management Solution ✓ All Kind of Pneumatic Fittings, Valve, Hose Sales
- ✓ Harmonic and Power Analyser ✓ Fire Protection Audit in Electrical Systems
- ✓ Wind Mill Thermal Energy Auditing ✓ Cost Saving Solution in Textile Industry
